PREFACE

This Standard is the result of many hours of effort by those volunteers on The NELAC Institute (TNI) Quality Systems Committee. The TNI Board of Directors wishes to thank these committee members for their efforts in preparing this Standard as well as those TNI members who offered comments during the voting process.

This Standard supplements Module 2, Quality Systems General Requirements, and may be used by any organization that wishes to implement a program for the accreditation of environmental laboratories.

TNI Voting Draft Standard December 2011

VOLUME 1, MODULE 7

Quality Systems for Toxicity Testing

1.0 TOXICITY TESTING

1.4 Method Selection

When it is necessary to use testing methods not covered by an approved method, these shall be subject to agreement with the data user and shall include a clear specification of the data user's requirements and the purpose of the environmental test. The method developed shall have been validated appropriately before use. Refer to Volume 1, Module 2 Sections 5.4.2, 5.4.3 and 5.4.4.

The characteristics of validated methods (e.g., the uncertainty of the results, limit of repeatability and/or reproducibility, robustness against external influences and/or cross-sensitivity against interference from the matrix of the sample/test object), as assessed for the intended use, shall be relevant to the users' needs.

1.5 Method Validation

Validation is the confirmation by examination and the objective evidence that the particular requirements for a specific intended use are fulfilled. Reference methods require no validation.

The validation of non standard methods must comply with Volume 1, Module 2, Sections 5.4.5.1, 5.4.5.2, and 5.4.5.3. Refer to Volume 1 Module 2 Section 5.4.5. No additional technical requirements for method validation are needed.

1.6 Demonstration of Capability (DOC)

1.6.1 General

a. An individual who performs any activity involved with preparation and/or analysis of samples must have constant, close supervision until a satisfactory initial DOC is completed (see Section 1.6.2). Prior to acceptance and institution of any method for data reporting, satisfactory initial DOC is required (see Section 1.6.2).

b. Thereafter, ongoing DOC (Section 1.6.3), as per the quality control requirements in Section 1.7.1.2 is required.

c. In cases where an individual has prepared and/or analyzed samples using a method that has been in use by the laboratory for at least one year prior to applying for accreditation, and there have been no significant changes in instrument type, methodology, or personnel or method, the ongoing DOC shall be acceptable as an initial DOC. The laboratory shall have records on file to demonstrate that an initial DOC is not required.

For the initial DOC, appropriate records as discussed in Section 1.6.2.1 shall be completed.

An initial DOC shall be completed each time there is a change in personnel, or method.

d. In general, this demonstration does not test the performance of the method in real world samples. However, before any results are reported, the initial DOC shall be performed. An
initial DOC may be completed by a group of analysts and is for situations in which several
individuals perform part of a set of activities that would produce a testing result.

e. All demonstrations shall be documented. All data applicable to the demonstration shall be
retained and readily available at the laboratory.

1.6.2 Initial DOC

An individual must successfully perform an initial DOC shall be made prior to using any method,
see 1.6.1 a) above, and at any time there is a significant change in personnel or method or any
time that a method has not been performed by the laboratory or analyst in a twelve (12) month
period.

1.6.3 Ongoing DOC

The laboratory shall have a documented procedure describing ongoing DOC that includes how the
laboratory intends to identify data associated with ongoing DOCS. The analyst(s) shall demonstrate
on-going capability by routinely meeting the quality control requirements of the method, laboratory
SOP, client specifications, and/or this Standard. If the method has not been performed by the
analyst in a twelve (12) month period, an Initial DOC (1.6.2) shall be performed. It is the
responsibility of the laboratory to document that other approaches to on-going demonstration of
capability are adequate. This on-going demonstration may include performing another initial
demonstration of capability as per 1.6.2 or a documented process of a subset relative to the quality control requirements of the
method, laboratory SOP, client specifications, and/or this Standard. This review can be used to
document the past performance of an individual or group of analysts and document any corrective action or retaining
necessary.

1.7 Technical Requirements

1.7.1 Quality Control

1.7.1.6 Constant and Consistent Test Conditions

e) Equipment used for routine support measurements of chemical and physical parameters
such as pH, DO, conductivity, salinity, alkalinity, hardness, chlorine, ammonia and weight
shall be calibrated, and/or standardized per manufacturer's instructions.

   i. All chemical measurements used in the course of monitoring toxicity shall meet the
   requirements of V1M4, sections 1.4, 1.5, 1.7 and 1.7.

   ii. All measurements and calibrations shall be documented.

j) A subset of organisms used in bioaccumulation tests shall be analyzed at the start of the test
(baseline) for the target compound/analytes to be measured in the bioaccumulation tests.
