EPA Clean Air Act Performance Audit Samples
Stationary Source Air Sampling (SSAS) Table
Effective Date July 1, 2009

Matrix	NELAC Analyte Code	Analyte	Conc Range	Acceptance Criteria ¹³			
1) mg/dscm = milligrams per dry standard cubic meter. Dry gas sample volume for audit sample is equal to 1 dscm.							
2) Prepared from Sulfuric Acid in HPLC-grade water.							
3) Prepared from Potassium Nitrate in HPLC-grade water.							
4) Prepared from Sodium Fluoride in HPLC-grade water.							
5) Prepared from Potassium Chloride and Sodium Fluoride in HPLC-grade water.							
6) Prepared on Glass Fiber Filter spiked with analytes diluted in 2% Nitric Acid.							
7) Prepared using 2% Nitric Acid.							
8) Prepared as whole-volume samples in audit cylinders. Diluent gas is ultra-high purity Nitrogen. Compatibility of the analytes may necessitate multiple cylinders to cover the requested analyte list. Due to potential interactions all listed analytes cannot be spiked into a single cylinder. In 40 CFR Part 60, Appendix A, Reference Method 18, Section 9.2 says the "+/- 10% fixed acceptance limits" are recommended criteria.							
9) Prepared with volatile organic compounds that condense at dry-ice temperatures (e.g., ketones, Acrolein) and volatile organic compounds that remain gaseous at dry-ice temperatures (e.g., Propane). Diluent gas is ultra-high purity Nitrogen that should contain 2-8% Carbon Dioxide.							
10) Prepare the Volatile Organic Compounds audit standards by mixing paint or ink with mineral spirits. Example of historical mixes: Prepare 13-17 kg paint or ink and 0.7-3.0 kg mineral spirits. Audit standards should be delivered and stored in sealed container with no head space. Assigned Values for the VOCs analytes are determined from the verification testing mean.							
Volatile Organic Compounds (g/L) = (Volatile Matter % / 100%) (Density, g/mL) (1000 mL/L)							
11) Prepared on Glass Fiber Filter spiked with Phenanthrene in Methylene Chloride.							
12) Prepared on XAD-2 cartridge spiked with analytes in nonane. At a minimum each Dioxins and Furans on XAD-2 Cartridge audit standard must contain the following three analytes: 2,3,7,8-Tetrachlorodibenzo-p-dioxin, 1,2,3,7,8-Pentachlorodibenzo-p-dioxin and 2,3,4,7,8-Pentachlorodibenzofuran plus at least five additional dioxin or furans randomly selected from the analyte list, one each from the five levels of chlorination (Tetra, Penta, Hexa, Hepta and Octa).							
13) Acceptance Criteria represent the EPA Audit Sample historical limits.
